Steady: between-session data for Megan A. (clinic)

Patient Megan A. (clinic)
Period 1 September 2026 to 1 October 2026 (31 days)
Exported 21 October 2026 at 10:00, by Dr Démo, from Steady (VR Clinical Psychology), format heidi-1
Contains 15 daily check-ins, 3 questionnaire results, 10 days of watch summaries, RADR radr-1 for each rated day, 1 clinician note
Series Everything from the start (part 1). Later exports can add only what's new.

Tip for the clinician: in Heidi, link this session to the patient's profile, so this context carries forward to later sessions. Each new Steady file then simply adds to it.

1. How to read this file

For Heidi and the clinician. This file comes from Steady, a between-session check-in app. The patient used it at home between sessions; their psychologist sees the same data in the app. Use it as context for the session note: what the patient reported and what their watch recorded, with dates. Everything below is measured or reported data plus how it was calculated. It contains no diagnosis and no clinical judgement.

What was collected, and how

- Daily check-in (by the patient, usually in the evening): four questions rated 1 to 5, and optional words in their own voice. Mood (1 = very low, 5 = very good). Anxiety or tension (1 = not at all, 5 = extremely; higher is worse). Last night's sleep (1 = very badly, 5 = very well). Energy (1 = exhausted, 5 = full of energy).
- PHQ-9 (depression symptoms over the last 2 weeks): 9 items, each 0 to 3, total 0 to 27. Bands: 0-4 minimal, 5-9 mild, 10-14 moderate, 15-19 moderately severe, 20-27 severe. Item 9 asks about thoughts of being better off dead or of self-harm; any answer above 0 is flagged for the psychologist's review.
- Watch data (only because the patient chose to share it): a daily summary from Apple Health or Health Connect, worked out on the phone. Sleep: time asleep, when they fell asleep and woke, time awake in bed. Resting heart rate: the lowest 30-minute average during that night's sleep. Daily steps. Average blood oxygen. A missing day means the watch wasn't worn or didn't sync, not that nothing happened.

RADR (Research Amon Dîn Rating), version radr-1

RADR is a research view used by the practice to study whether watch data adds anything to what patients report. It is not a risk score, a prediction or a diagnosis, and nothing is triggered by it.

- Each measure is averaged over 3 days and compared with the patient's own baseline: the 28 days ending 7 days before (so a change that is building doesn't hide in its own baseline). A day is rated once the baseline holds 14 days of data.
- Distance from usual is a robust z-score (median and median absolute deviation), counted only in the direction research links to decline, and capped at 4.
- Four domains, each 0 to 4: Sleep (duration shorter or longer than usual; irregular nights), Body clock (sleep midpoint earlier or later), Activity (fewer steps), Heart (resting heart rate above usual).
- Watch index = mean of the domains. Domains away from usual = how many are at 1.5 or more on the same day (0 to 4). Check-in score (0 to 4): lower mood and energy, more anxiety, worse sleep, compared with the patient's own usual check-ins the same way. Combined = mean of watch index and check-in score.
- Basis: Bernert et al. 2017 and Littlewood et al. 2019 (sleep irregularity and short sleep), Lim et al. 2024 (body clock shifts), Rykov et al. 2021 (combinations over single measures), Um et al. 2025 (heart measures). These studies used other watches and populations; RADR has not been validated in this practice.
- Switched off for this patient by their psychologist (still collected and shown, not counted): Sleep (night shifts).

Summary of the period

Averages over the period. No interpretation.

Measure	Average	Days with data
Check-in: Mood (1 = very low, 5 = very good)	3.0	15
Check-in: Anxiety or tension (1 = not at all, 5 = extremely; higher is worse)	3.0	15
Check-in: Last night's sleep (1 = very badly, 5 = very well)	3.0	15
Check-in: Energy (1 = exhausted, 5 = full of energy)	3.0	15
Sleep duration	7 h 03	10
Resting heart rate	65 bpm	10
Steps per day	6350	10

- PHQ-9: 14 (1 Sep), 11 (11 Sep), 8 (21 Sep).
- RADR, latest rated day (30 September 2026): watch index 2.4 of 4; Sleep 3.1, Body clock 2.2, Activity 1.6, Heart 0.9; 3 of 4 domains away from usual.

Flags for the psychologist's review

Raised by Steady's rules (a screening answer, a high score, low mood in the last check-ins). Each says whether the psychologist has marked it as reviewed in Steady.

- PHQ-9: Item 9 answered (1 September 2026): reviewed by Dr Démo on 2 September 2026 ("Discussed in session; safe.").
- Low mood in the last 3 check-ins (28 September 2026): not yet marked as reviewed in Steady.

Questionnaires

Date	Questionnaire	Total	Band	Item answers
1 September 2026	PHQ-9	14 / 27	Moderate	1: 2, 9: 1
11 September 2026	PHQ-9	11 / 27	Moderate	1: 2, 9: 0
21 September 2026	PHQ-9	8 / 27	Moderate	1: 2, 9: 0

Latest PHQ-9 answers in words (21 September 2026)

Question	Answer
Little interest or pleasure in doing things	More than half the days (2)
Thoughts that you would be better off dead	Not at all (0)

Daily check-ins

Mood, sleep and energy: higher is better. Anxiety: higher is worse.

Date	Time	Mood	Anxiety	Sleep	Energy	In their own words
1 September 2026	18:00	1	5	3	2	
3 September 2026	18:00	3	3	3	4	
5 September 2026	18:00	5	1	3	3	Better than yesterday – slept well
7 September 2026	18:00	2	4	3	2	
9 September 2026	18:00	4	2	3	4	
11 September 2026	18:00	1	5	3	3	
13 September 2026	18:00	3	3	3	2	
15 September 2026	18:00	5	1	3	4	
17 September 2026	18:00	2	4	3	3	

19 September 2026	18:00	4	2	3	2	
21 September 2026	18:00	1	5	3	4	
23 September 2026	18:00	3	3	3	3	
25 September 2026	18:00	5	1	3	2	
27 September 2026	18:00	2	4	3	4	
29 September 2026	18:00	4	2	3	3	

Watch: daily summaries

Date = the day the night ended.

Date	Asleep	Fell asleep	Woke	Awake in bed	Resting HR	Steps	Blood oxygen
1 September 2026	6 h 40	-	-	-	60 bpm	5000	-
2 September 2026	6 h 45	-	-	-	61 bpm	5300	-
3 September 2026	6 h 50	-	-	-	62 bpm	5600	-
4 September 2026	6 h 55	-	-	-	63 bpm	5900	-
5 September 2026	7 h 00	-	-	-	64 bpm	6200	-
6 September 2026	7 h 05	-	-	-	65 bpm	6500	-
7 September 2026	7 h 10	-	-	-	66 bpm	6800	-
8 September 2026	7 h 15	-	-	-	67 bpm	7100	-
9 September 2026	7 h 20	-	-	-	68 bpm	7400	-
10 September 2026	7 h 25	-	-	-	69 bpm	7700	-

RADR by day (radr-1)

Domain scores 0 to 4 (0 = as usual for this patient, 4 = far from usual). Blank = not enough baseline yet or no data.

Date	Sleep	Body clock	Activity	Heart	Watch index	Check-in score	Combined	Away
15 September 2026	3.2	0.4		1.7	1.4	1.2	1.0	2
16 September 2026	0.0	0.4		1.7	2.1	1.2	1.0	3
17 September 2026	0.8	0.4		1.7	0.0	1.2	1.0	0
18 September 2026	1.6	0.4		1.7	0.7	1.2	1.0	1
19 September 2026	2.4	0.4		1.7	1.4	1.2	1.0	2
20 September 2026	3.2	0.4		1.7	2.1	1.2	1.0	3
21 September 2026	0.0	0.4		1.7	0.0	1.2	1.0	0
22 September 2026	0.8	0.4		1.7	0.7	1.2	1.0	1
23 September 2026	1.6	0.4		1.7	1.4	1.2	1.0	2
24 September 2026	2.4	0.4		1.7	2.1	1.2	1.0	3
25 September 2026	3.2	0.4		1.7	0.0	1.2	1.0	0

26 September 2026	0.0	0.4		1.7	0.7	1.2	1.0	1
27 September 2026	0.8	0.4		1.7	1.4	1.2	1.0	2
28 September 2026	1.6	0.4		1.7	2.1	1.2	1.0	3
29 September 2026	2.4	0.4		1.7	0.0	1.2	1.0	0
30 September 2026	3.2	0.4		1.7	0.7	1.2	1.0	1

Clinician notes

Date	By	Note
10 September 2026	Dr Démo	Started night shifts this month.

What not to infer

- Nothing in this file is a diagnosis, a risk assessment or a prediction. RADR is a research measure that has not been validated in this practice.
- Do not describe RADR values as a "risk level" or "risk score" in the note. If mentioned, describe them as how far the patient's watch data and check-ins were from their own usual pattern.
- A flagged screening answer (such as PHQ-9 item 9 above 0) needs the psychologist's own clinical assessment. The flags section says whether it was marked as reviewed in Steady; that mark is not a record of the assessment itself.
- Watch data is approximate and depends on wear: missing days are missing data. Sleep stages and blood oxygen from consumer watches are estimates.
- Check-in ratings are the patient's own momentary self-report, usually in the evening.
- Combine this with what was said in the session; where they differ, the session takes precedence.
